

: Level 1 Machine Test

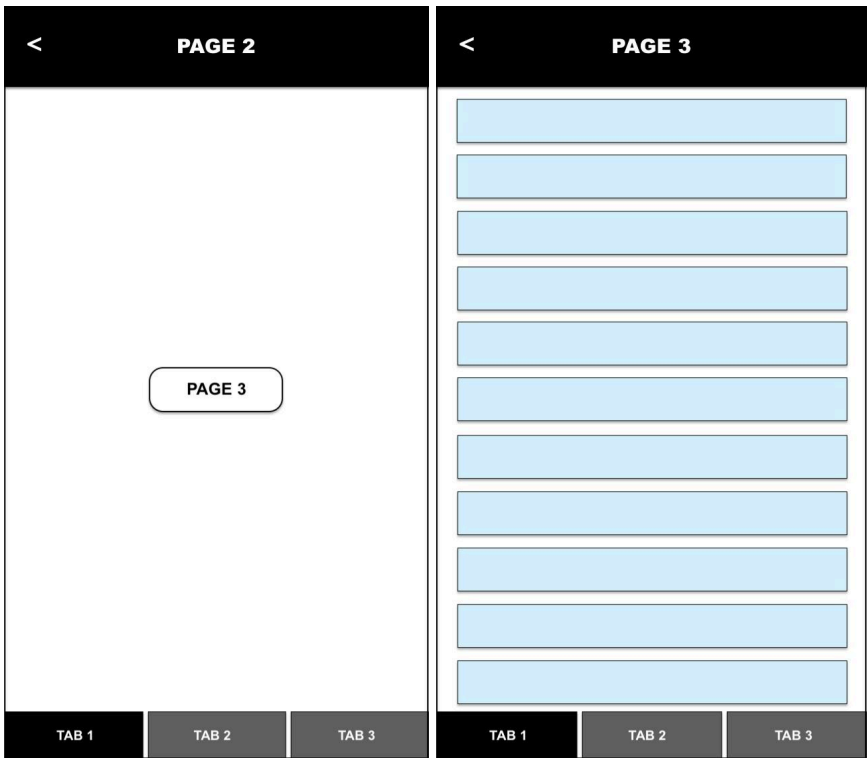

Build a flutter app using getX, that meets the following requirements:

The app launches to a tab bar view with the pages below.

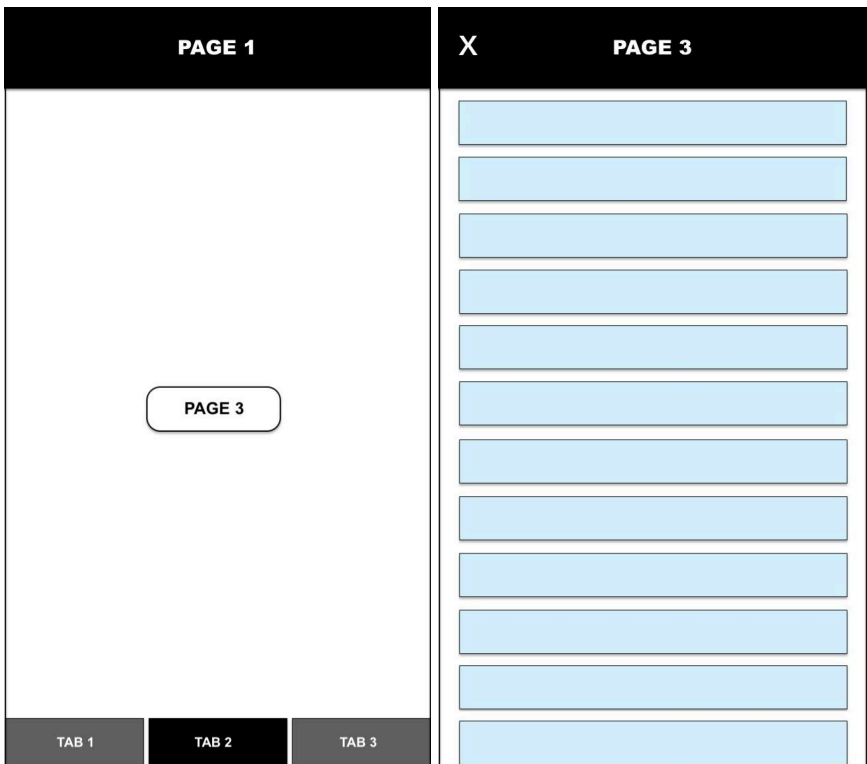

Page 1 has a tab bar with three tabs: Tab 1, Tab 2, and Tab 3.
Tab 1 has a button that opens Page 2.

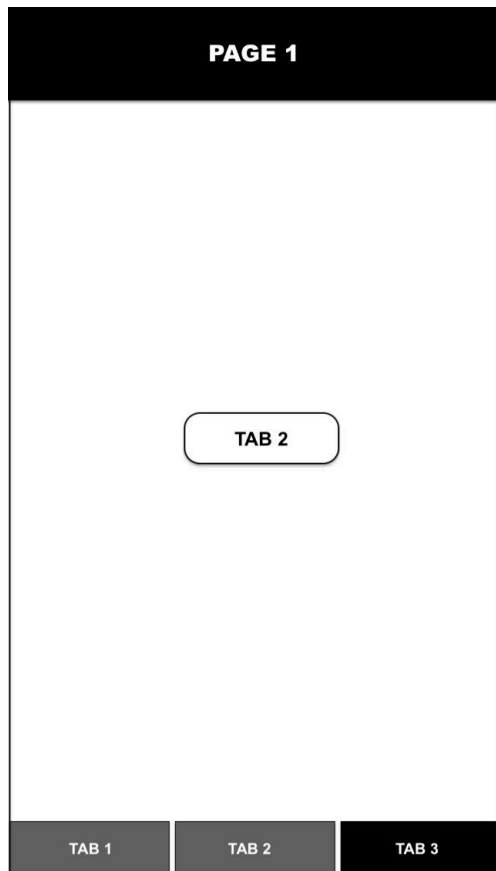

Page 2 has a button that opens Page 3.
Page 3 is a scrollable list view. This can be populated by reading the attached json file. Page 3 has a back button and it is a part of Tab 1.

Tab 2 has a button that opens Page 3 as well.
Here Page 3 should open on top of the tab bar with a close button instead of back button.

Tab 3 has a button that takes the user to Tab 2.

If the current tab button is clicked again, it should clear any pages or popups on top of it.

All pages should be written with separate UI and controller classes.

You can submit the output along with source code within 72 Hrs of receiving this test.
